DIGITAL LITERACY PROJECT REPORT

NAME – NEHAL FATING

REGISTRATION NUMBER – 23BCE10180

BRANCH – BTECH , CSE

YEAR – 3RD YEAR

COURSE CODE – CSE0001

COURSE NAME – DIGITAL LITERACY

Introduction

The Digital Literacy Project was designed to develop essential skills required to effectively navigate the modern digital world. As part of this project, I assumed the role of a Student Digital Ambassador, responsible for promoting awareness about digital tools, online safety, and professional communication among peers.

The project consisted of five practical tasks, each focusing on a different aspect of digital literacy. These tasks included creating an infographic to spread awareness, building a professional digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and analyzing a cybercrime case study.

Through this project, I gained hands-on experience with widely used platforms such as Canva, GitHub, LinkedIn, Kaggle, HackerRank, and Google Forms. It also helped me understand the importance of maintaining a professional online identity and practicing safe internet usage. This project not only improved my technical skills but also enhanced my communication, creativity, and critical thinking abilities.

Task 1: Infographic Creation

In Task 1, I created a digital literacy awareness infographic using Canva. The infographic focused on key topics such as the importance of digital literacy, safe internet practices, and maintaining a professional online presence. The aim was to present the information in a visually appealing and easy-to-understand format so that students can quickly grasp essential digital concepts.

The design included icons, short descriptions, and structured sections to improve readability. I used color combinations and layout techniques to make the infographic engaging and informative. One interesting aspect of this task was learning how to simplify complex information into concise visual content.

However, I initially found it challenging to organize the content properly within a single page while maintaining clarity. After experimenting with different layouts, I was able to create a balanced and effective design. This task helped me improve my creativity and understanding of visual communication.

Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub, Kaggle, and LinkedIn to build a professional digital presence. GitHub is used for showcasing coding projects and repositories, Kaggle is useful for data science practice and competitions, and LinkedIn is a professional networking platform.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I updated my education details and profile information. Kaggle was set up to explore datasets and improve my data science skills.

These platforms will be very useful for my future career as they help in building a strong portfolio and connecting with professionals. Over the next four years, I plan to regularly update my GitHub with projects, participate in Kaggle competitions, and grow my LinkedIn network.

This task helped me understand the importance of maintaining an online professional identity and how it can impact career opportunities.

Task 3: Platforms (200 words)

In Task 3, I explored both coding platforms and collaboration tools. For coding practice, I created an account on HackerRank and solved beginner-level problems. These problems helped me understand basic programming concepts and improve my logical thinking and problem-solving skills. HackerRank is particularly useful for preparing for technical interviews and coding assessments.

In addition to coding practice, I worked with Google Forms to create a Digital Literacy Awareness Quiz. The form included five questions, consisting of multiple-choice and short-answer types. This activity helped me understand how to design surveys and collect responses efficiently. I also analyzed responses through the linked Google Sheet, which provided insights into how data is stored and managed.

This task was highly beneficial as it introduced me to tools that are essential for both academic and professional use. Coding platforms like HackerRank help in skill development, while tools like Google Forms are useful for data collection, surveys, and feedback analysis.

Overall, this task improved my technical knowledge and gave me practical exposure to widely used digital platforms.

Task 4: Email & Etiquette

In Task 4, I learned about professional communication and email etiquette. I drafted two emails—one requesting an assignment extension and another expressing interest in an internship opportunity. While writing these emails, I ensured the use of clear subject lines, formal greetings, structured content, and proper sign-offs.

A common issue caused by poor digital communication is misunderstanding or misinterpretation. For example, if a student sends an email without a proper subject line or uses informal language, the message may appear unprofessional and may not receive a response. In some cases, important information may be ignored due to lack of clarity.

Such situations can be avoided by following proper email etiquette, including being polite, concise, and clear. Using appropriate language and structure ensures effective communication.

This task helped me understand the importance of professionalism in digital communication and improved my ability to write formal emails.

Task 5: Cybercrime (Phishing)

In Task 5, I studied phishing as a form of cybercrime. Phishing is a technique used by attackers to trick individuals into revealing sensitive information such as passwords, bank details, or personal data by pretending to be a trusted entity.

While researching this topic, I was surprised by how realistic phishing emails and websites can appear. Attackers often use logos, official-looking messages, and urgent language to deceive users. Many people fall victim to such scams because they are unaware of the warning signs.

This task made me realize the importance of being cautious while using the internet. I learned to verify links, avoid clicking on suspicious emails, and check the authenticity of websites before entering personal information.

As a result of this learning, I will adopt safer online practices and remain alert to potential threats. This task significantly increased my awareness of cybersecurity and responsible internet usage.

Conclusion

The Digital Literacy Project provided valuable insights into various aspects of digital skills and online behavior. Through this project, I gained practical experience in creating visual content, building a professional digital portfolio, using coding platforms, and understanding email etiquette.

Additionally, the cybercrime case study helped me become more aware of online threats and preventive measures. Each task contributed to improving my technical knowledge, creativity, communication skills, and awareness of digital safety.

Overall, this project has prepared me to use digital tools more efficiently and responsibly. It has also motivated me to continuously improve my skills and maintain a professional presence in the digital world, which will be beneficial for my academic and professional future.
